EMPLOYMENT

Research Assistant

Sep 2022–Present

Northeastern University - [Bau Lab](#) (Interpretable Neural Networks)

Boston, MA

- Researching the mechanisms large neural networks use to learn from context in order solve different tasks, and how their internal representations enable their impressive generalization capabilities.
- “[Function Vectors in Large Language Models](#)” (ICLR 2024) investigates whether LLMs contain function representations through the lens of in-context learning. We found that a small set of attention heads transport extractable task-representative information that is robust to different contexts.

Research Assistant

Sep 2020–Aug 2022

Brigham Young University - Computer Science Department, Advisor: Ryan Farrell

Provo, UT

- Researched unsupervised methods for fine-grained image segmentation

Research Intern

May–Aug 2022

Air Force Research Lab/Wright State University, AFRL Advisor: Oliver Nina

Remote

- Investigated self-supervised learning methods for fine-grained image classification and presented my research to other interns and AFRL research advisors.

Machine Learning Intern

May–Aug 2019

Brigham Young University - Enrollment Services, Manager: Kristine Manwaring

Provo, UT

- Developed [Early Alert](#), a machine learning system that identifies students struggling academically and enables personalized outreach from campus support offices.
- [Early Alert](#) is deployed and in active use by most academic advisors and support offices at BYU.

Research Assistant

Feb 2018–Aug 2020

Brigham Young University - Physics Department, Advisor: Mark Transtrum

Provo, UT

- Researched crowd noise classification using machine learning methods. My work focused on crowd noise data from basketball games and a Mardi Gras parade float, resulting in 2 publications [3, 4].
